Deutsche Bundesbank	38,987,432.89	127,998,268.81

The position of current accounts (nostro) compared to December 31, 2020 has decreased significantly, the change is due to the activity of these accounts and the management of the asset portfolio also affected by the negative rates in the financial markets (respectively notes 5, 6, 7 and 8, which are very closely related to each other referred to in terms of asset management). The reduction in this group may have the effect of reducing interest expense from the negative rates that correspondent banks (excluding the Fed - Federal Reserve account) apply to the accounts disclosed above.

Both categories that belong to the group under note 7 are debt letters issued (issued) by different countries and institutions in Europe and United States of America, in analytics the geographical distribution is as listed on page 10 (in the table by geographical distribution).
